

# Testing and Evaluation of WRF Reference Configurations

Michelle Harrold, Jamie Wolff, Zach Trabold, and  
Louisa Nance

National Center for Atmospheric Research (NCAR)

12<sup>th</sup> Annual WRF User's Workshop  
22 June 2011

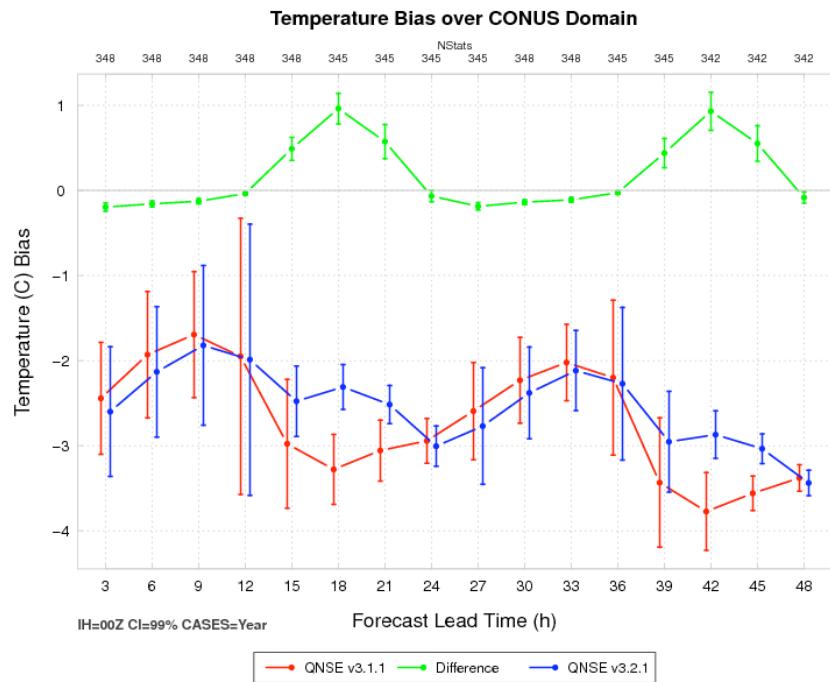

Developmental Testbed Center

# Overview

- Description of Reference Configuration (RC) concept and the function of the Developmental Testbed Center (DTC) in RC efforts
- Verification results from two WRF-ARW configurations tested with version 3.1.1 and version 3.2.1

The screenshot shows the DTC website at <http://www.dtcenter.org/config/>. The main navigation bar includes links for NDAA, ESRL, GSD, NCAR, RAL, DTC home, Reference Configurations, Testing & Evaluation, Community Codes, Verification, Visitor Program, and Events. The page title is "Developmental Testbed Center | DTC". Below the title, there's a sub-navigation for "WRF Reference Configurations" with links for "About", "DTC RC", "Community Contributed RC", and "Contacts". The main content area features a diagram titled "WRF REFERENCE CONFIGURATIONS" with the subtitle "PROVIDING THE RESEARCH COMMUNITY WITH BASELINES AGAINST WHICH THE IMPACTS OF NEW TECHNIQUES CAN BE EVALUATED". The diagram illustrates the process flow: "Reference Configurations" leads to "Definition module for new technology", "Access of RC configuration", "RC testing", "Selection of particular RCs", "WRF Required", "Implementation and Testing", and finally "Code Develop and Code Overview". To the right of the diagram, there's a section titled "DTC Reference Configurations" listing various WRF versions and ARW configurations, along with a "RC Naming Convention Key (PDF)". Below this is a "Community Contributed Reference Configurations" section with a "Submit CCRC Candidates" button and a "RC CONCEPT DOCUMENT (PDF)" link. At the bottom, there's a "Documentation" section with a "WRF Reference Configuration" link.

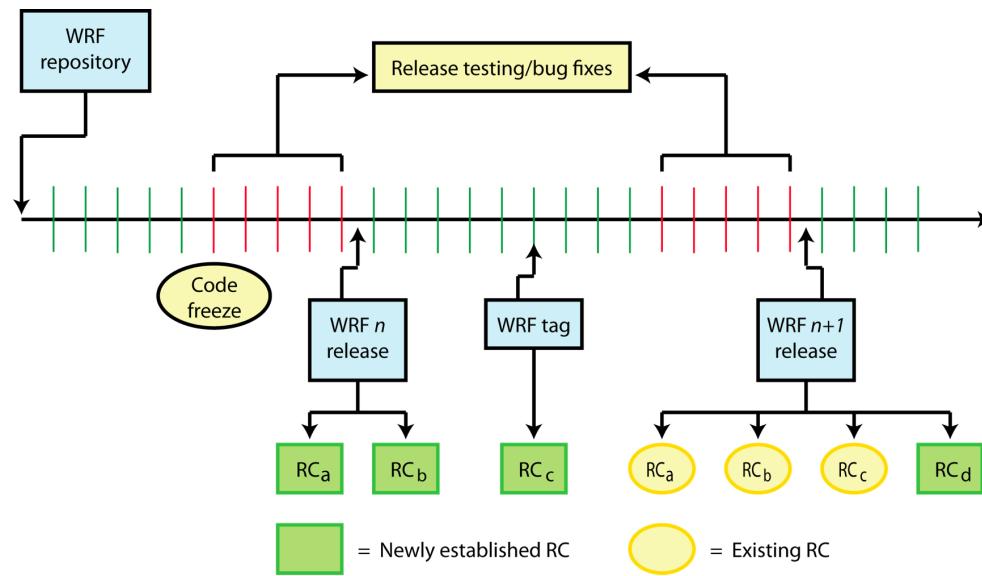

# RC Description

---

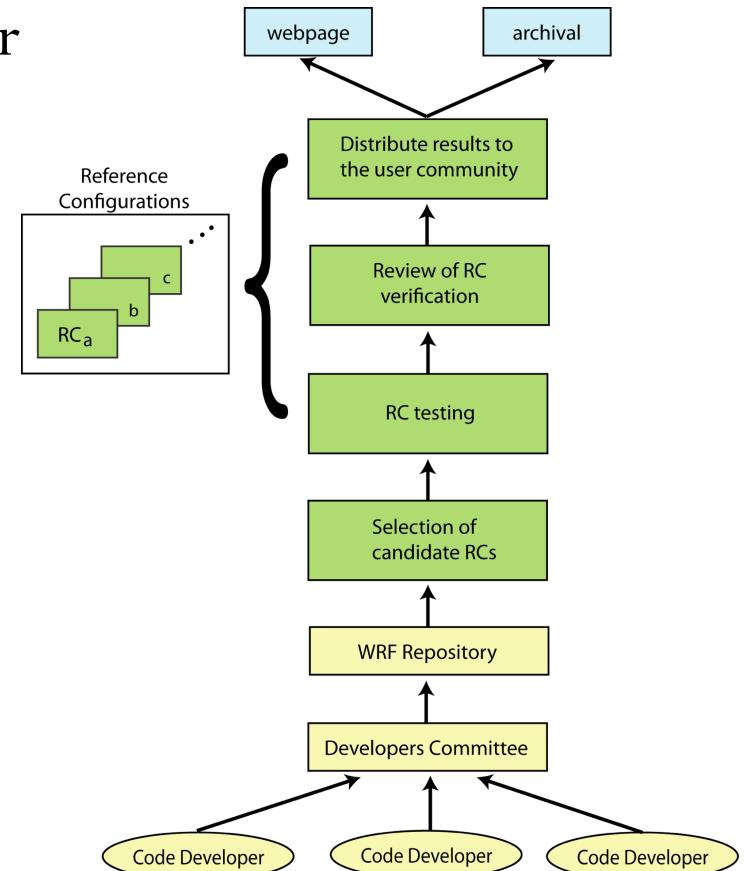

# RC Concept

- **Concept:** Rigorously test and evaluate select WRF configurations
- **Goal:** Provide well-documented baseline verification results for specific configurations of WRF that are broadly distributed to the numerical weather prediction community
- Beneficial to both the operational and research communities

# RC Concept: Function of the DTC

- The Developmental Testbed Center
  - Establishes RCs, performs testing and evaluation, and disseminates results
    - Runs end-to-end system and generate verification results using appropriate verification techniques
    - Retest relevant RCs based on latest WRF release
  - Solicits and facilitates input from user community for Community Contributed Reference Configurations (CCRCs)

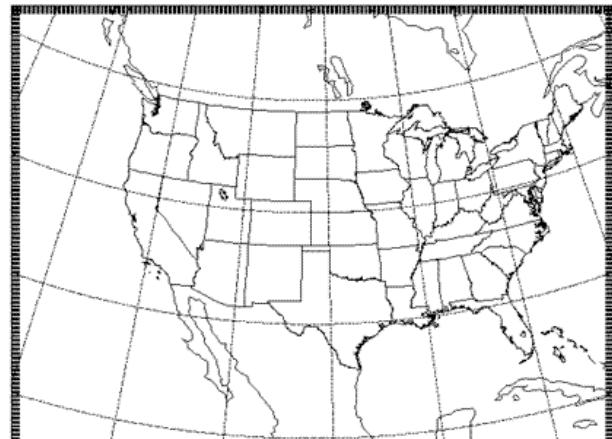

# RC Testing & Evaluation

---

# Experiment Design

- **End-to-end system:** WPS, WRF, WPP, and MET (v3.0.1)
- **Test Period:** 2 June 2008 – 31 May 2009
- **Retrospective forecasts:** 48-h forecasts initialized every 36 h
- **Domain:** 15-km CONUS grid
- **Physics suite** for each configuration:

WRF-ARW computational domain

Physics Suite	AFWA Configuration	QNSE-replacement Configuration
<b>Microphysics</b>	WRF Single-Moment 5	WRF Single-Moment 5
<b>Radiation (SW/LW)</b>	Dudhia/RRTM	Dudhia/RRTM
<b>Surface Layer</b>	Monin-Obukhov similarity theory	Quasi-Normal Scale Elimination
<b>Land Surface Model</b>	Noah	Noah
<b>PBL</b>	Yonsei University	Quasi-Normal Scale Elimination
<b>Convection</b>	Kain-Fritsch	Kain-Fritsch

# Model Verification

- **Verification stratifications** include temporal and spatial aggregations
- **Grid-to-point** verification for surface and upper-air temperature, dew point temperature, winds
  - Bias-corrected root mean square error (BCRMSE) and mean error (bias)
- **Grid-to-grid** verification for 3-h and 24-h QPF
  - Gilbert Skill Score (GSS) and frequency bias
- **Confidence intervals (CIs)** computed at the 99% level
- **Pair-wise difference** technique applied by computing difference between versions (v3.2.1 – v3.1.1)

Verification domain

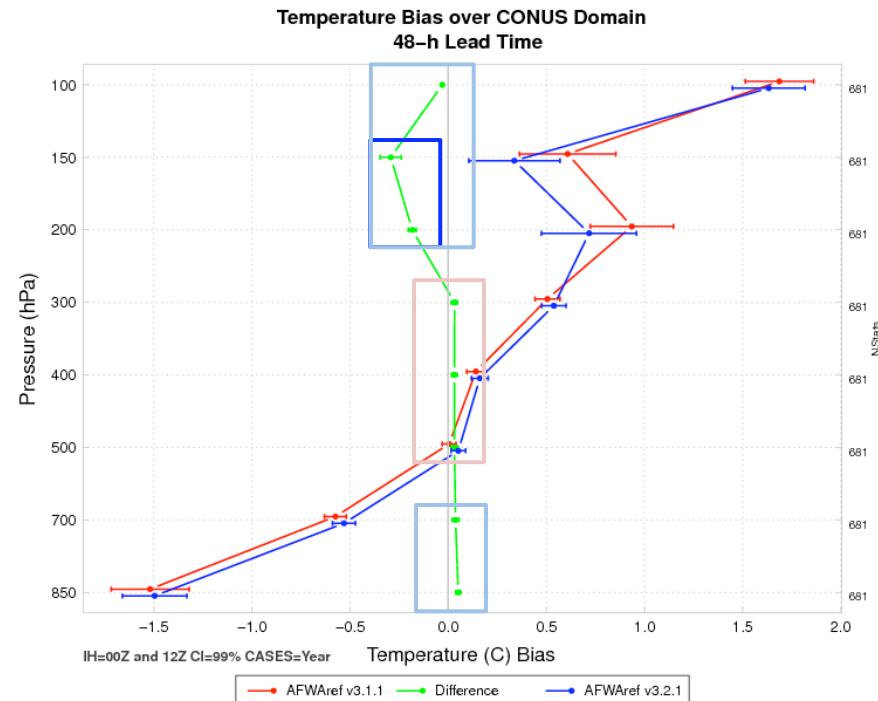

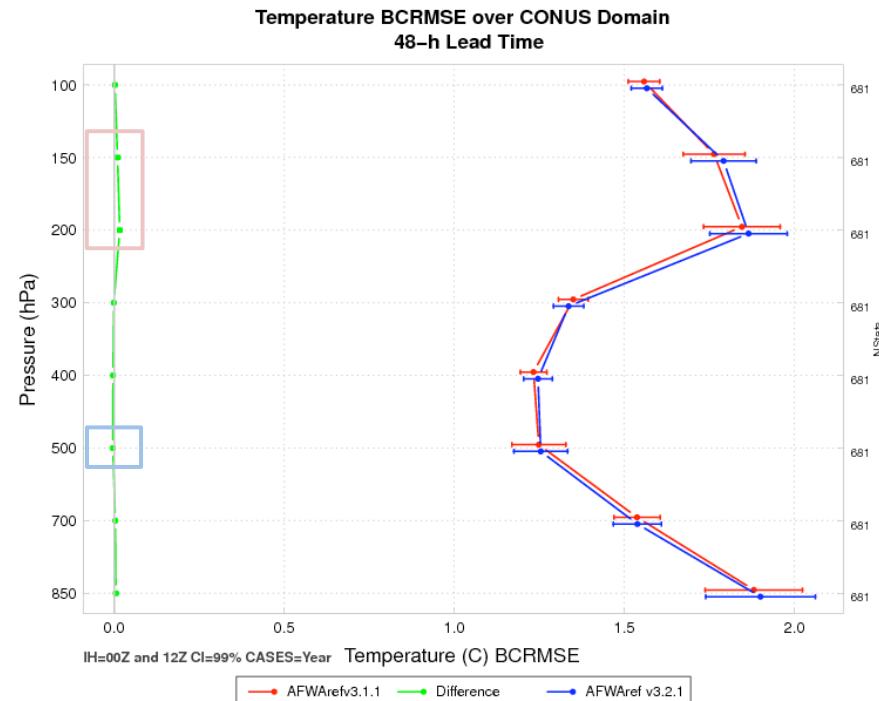

# Establishing Significance

- Identified **statistically significant (SS)** differences between configurations as well as **practically significant (PS)** differences
  - Large dataset increases number of pair-wise differences - not always practically meaningful
  - SS: Objectively determined by using pair-wise difference technique
  - PS: Censored data to highlight pair-wise differences greater than a specified value
    - WMO requirements for operational measurement uncertainty:  
 $T/T_d > 0.1$  K, wind  $> 0.5 \text{ ms}^{-1}$ , and precip. accumulation  $> 0.1 \text{ mm}$

# Verification Results

---

# AFWA: Upper Air Temperature

# Upper Air SS/PS Tables

**SS (light shading)** and **PS (dark shading)** differences for the annual aggregation of upper air temperature, dew point temperature, and wind *BCRMSE* and *bias*

# Summary

- Results from the two RCs vary based on forecast variable, initialization, temporal/spatial aggregations, etc.
- Configuration descriptions, executive summaries, graphics, documentation, and a full suite of verification results are found at:

AFWA: [http://verif.rap.ucar.edu/config/v3.2.1/ARW\\_PS4.1.1.4.2.4.1/index.php](http://verif.rap.ucar.edu/config/v3.2.1/ARW_PS4.1.1.4.2.4.1/index.php)

QNSE: [http://verif.rap.ucar.edu/config/v3.2.1/ARW\\_PS4.1.1.2.1.1/index.php](http://verif.rap.ucar.edu/config/v3.2.1/ARW_PS4.1.1.2.1.1/index.php)

# Current/Future Activities

- Reference Configuration efforts with WRF v3.3
  - Retest AFWA and QNSE RCs
    - Assess performance of each configuration individually
    - Comparison of each configuration for v3.2.1 versus v3.3
  - Test new RCs
    - Hurricane WRF (HWRF) 2011 Operational Baseline
    - North American Mesoscale (NAM) model physics suite
    - WRF Rapid Refresh (RR) physics suite
- Solicit WRF community for additional RCs and CCRCs
- For more information: <http://www.dtcenter.org/config/>
